The U.S. Army Corps of Engineers (USACE), Vicksburg District, is hereby reissuing a Department of the Army General Permit (General Permit 19) for structures or work affecting navigable waters of the United States and discharges of dredged and/or fill material in waters of the United States, which are associated with the exploration for, and subsequent production of, hydrocarbons. These activities include the construction of related items such as access roads, initial flowlines, mud and reserve pits, and associated levees; the construction of earthen mounds (pads) for the pump, treater, and tank battery; and for the construction of a firewall around the tank battery. A map of the Vicksburg District is attached (enclosure).

This action is being taken pursuant to Federal regulations printed in the Federal Register on November 13, 1986, concerning permits for activities in waters of the United States. These regulations state the U.S. Army Corps of Engineers' responsibility for regulating: structures or work in or affecting navigable waters of the United States under Section 10 of the Rivers and Harbors Act of 1899 (30 Stat. 1151; 33 U.S.C. 403); and, discharges of dredged and/or fill material into waters of the United States under Section 404 of the Clean Water Act (33 U.S.C. 1344).

General Permits may be issued for a category or categories of activities when: (1) those activities are substantially similar in nature and cause only minimal individual and cumulative environmental impacts; or (2) the General Permit would result in avoiding unnecessary duplication of the regulatory control exercised by another Federal, State, or local agency, provided it has been determined that the environmental consequences of the action are individually and cumulatively minimal. The final
decision regarding a determination that the proposed activities comply with the requirements for issuance of General Permits was made using information that is available for inspection at the offices of the Vicksburg District's Regulatory Branch at 4155 Clay Street, Vicksburg, Mississippi.

This General Permit may be used for activities regulated under Section 10 of the Rivers and Harbors Act of 1899 (30 Stat. 1151; 33 U.S.C. 403) (Section 10) provided there are also activities regulated under Section 404 of the Clean Water Act (33 U.S.C. 1344) (Section 404). This General Permit does not apply to activities that are regulated only through Section 10 (e.g. directional drilling under a designated Section 10 navigable water). Activities regulated only through Section 10 will require separate authorization by the District Engineer.

This General Permit contains certain limitations intended to protect the environment and natural and cultural resources. Wetland impacts associated with regulated activities authorized under this General Permit shall be limited to a maximum of 5.0 acres for all work (including all portions of access roads, well pads, utility lines, etc.) that requires a Department of the Army authorization. This General Permit shall not be used to authorize: water withdrawals; the construction of ponds/pits for the storage of hydraulic fracturing water within the 100-year floodplain or immediately adjacent to a natural waterway; or the construction of brine disposal wells.

Construction activities which include regulated work and/or discharges of dredged or fill material into Section 10/404 or Section 404 regulated Waters of the United States (collectively hereafter referred to as: WOTUS) which are not specifically authorized by this General Permit are prohibited unless specifically approved by the District Engineer via separate authorization. Conformance with conditions contained in the General Permit does not necessarily guarantee authorization under this General Permit. In cases where the District Engineer considers it necessary, an application for an individual permit will be required.

In compliance with requirements of Section 401 of the Clean Water Act, the Vicksburg District has obtained water quality certification (WQC) for General Permit 19 from each of the following agencies: Arkansas Department of Environmental Quality; Louisiana Department of Environmental Quality; and Mississippi Department of Environmental Quality.

REQUEST FOR AUTHORIZATION UNDER THE GENERAL PERMIT – APPLICATION REQUIREMENTS: IN ORDER TO BE AUTHORIZED BY THIS GENERAL PERMIT, PARTIES PROPOSING THE WORK ARE REQUIRED TO SUBMIT TO THE DISTRICT ENGINEER, IN WRITING, THE FOLLOWING INFORMATION IN 8 ½ x 11 INCH FORMAT AT LEAST 60 DAYS PRIOR TO THE PLANNED START DATE FOR THE WORK:
a. State the number of the General Permit under which the work will be conducted. (General Permit - 19) (GP-19)

b. Statement that the work will be conducted in compliance with the terms and conditions of GP-19 and will not adversely impact adjoining properties.

c. A location description including: latitude and longitude, Section, Township, Range, County or Parish, and State; a plan-view (including a digital aerial overlay) location map showing the proposed worksite, existing wells, roads, and streams within 1,500 feet of the proposed site; a USGS quadrangle map depicting the area of potential development; a map showing FEMA flood zone ratings for project area and the location of the proposed well(s), flowline, and proposed access road(s).

d. Any application associated with a well site that was previously authorized by a Department of the Army permit will reference the Vicksburg District permit identification number (MVK-Year-XXXX) for that well site authorization.

e. Estimated starting date, and estimated time duration to completion of the drilling phase (when applicable), or other construction activity in/afffecting WOTUS.

f. Name, mailing address, telephone number, and email address of the party (person and agency) applying for authorization, the operator of the well and the well number (please name and/or number any offset sites included in each application).

g. A drawing of the proposed structures (tank batteries, wells, access roads, etc.) including elevations (when available), dimensions (in feet), total area impacted (in acres for wetlands; in both acres and linear feet for streams), amounts of excavated and fill material (in cubic yards).

h. A delineation of wetlands, other special aquatic sites, and other waters, such as lakes and ponds, and perennial, intermittent, and ephemeral streams, on the project site. Wetland delineations will be prepared in accordance with the current method required by the Corps. The applicant may ask the Corps to delineate the special aquatic sites, including wetlands, and other waters on the project site, but there may be a delay if the Corps does the delineation, especially if the project site is large or contains many waters of the United States. Furthermore, the application evaluation period will not start until the delineation has been submitted by the applicant or completed by the Corps, as appropriate.

i. An informational narrative and/or list detailing the individual aquatic resource impacts (in acres for wetlands; in acres and linear feet for streams), and the total impacts for each resource type (e.g. emergent wetland, forested wetland, intermittent stream, etc.), all impact activities (discharge of dredged and/or fill material, conversion, etc.), impact duration (temporary or permanent), and the latitude/longitude (approximate centerpoint) for each impact. In addition, current site
photos of the WOTUS to be impacted should be provided.

[NOTE: An Aquatic Resources Identification and Impacts Spreadsheet is available for use on the Vicksburg District’s Regulatory Web Page]:
https://www.mvk.usace.army.mil/Missions/Regulatory/Permits/

j. A narrative describing how impacts to WOTUS were minimized to the maximum extent practicable. For projects that include adverse impacts to WOTUS, the complete application will include information on mitigation in all forms (i.e. avoidance, minimization, and compensation) to minimize overall adverse impacts to WOTUS.

For projects with unavoidable adverse functional impacts greater than 0.10 acre to wetlands, the complete application will include a statement describing: how, if required, the compensatory mitigation requirement will be satisfied (either through purchase of mitigation credits from an approved mitigation bank or “in lieu fee” provider, or through permittee responsible mitigation); or explaining why the project-specific adverse effects are no more than minimal and why compensatory mitigation should not be required. As an alternative, the prospective permittee may submit a conceptual or detailed mitigation plan. If the applicant proposes permittee responsible mitigation, the application will not be considered complete until the Corps receives an acceptable permittee responsible mitigation plan.

[NOTE: Information on the Vicksburg District’s current mitigation requirements is available on the MVK Regulatory Web Page]:
https://www.mvk.usace.army.mil/Missions/Regulatory/Mitigation/

k. The name(s) of those federally listed endangered or threatened species that may be affected by the proposed work or that may utilize the designated critical habitat that may be affected by the proposed work.

l. For an activity that may affect a historic property listed on, determined to be eligible for listing on, or potentially eligible for listing on, the National Register of Historic Places, the application will state which historic property may be affected by the proposed work or include a vicinity map indicating the location of the historic property.

m. For work proposed: on or adjacent to any stream in a component of a National Wild and Scenic Rivers System or in a component of a State Natural and Scenic Rivers System; on a property/area owned or managed by a State or Federal natural resource agency (e.g. wildlife management areas, national wildlife refuges, national forests, etc.), the applicant must submit with their request for authorization under this General Permit, the agency point of contact (including phone number, mailing address, and email address) and proof of initiation of the applicant’s request for approval from the managing agency.
n. A description of the best management practices (BMPs) that will be used to minimize movement of disturbed soil(s) from the construction into adjacent WOTUS.

o. For enhanced oil recovery (EOR) projects, the application will include a map showing the land area beneath which the target formation will be pressurized. This map will also identify locations of existing wells that penetrate the affected formation. For these operations, the application will also include an affirmative statement that the identified existing wells have been inspected and determined to be capable of withstanding expected pressures.

p. For activities affecting structures or works built by the United States: If a GP-19 activity also requires permission from the Corps pursuant to 33 U.S.C. 408 because it will alter or temporarily or permanently occupy or use a USACE federally authorized Civil Works project, the application must include a statement (and any associate documents) confirming that the project proponent has submitted a written request for Section 408 permission to the Vicksburg District office having jurisdiction over that USACE project.

Special Conditions:

1. All proposals for hydrocarbon exploration/production activities shall reduce the area of impact to the minimum area absolutely necessary for construction. Unavoidable functional loss impacts exceeding 0.1 acre for wetlands, may require compensatory mitigation. See Application Requirements ‘i.’ and ‘j.’ (above) for information requirements that must be supplied to inform the District Engineer’s determination of mitigation requirements.

2. No regulated activity may cause the permanent loss, or conversion, of greater than 0.5 acre of cypress swamp and/or cypress-tupelo swamp.

3. Projects shall not be authorized in areas included within the Louisiana or Mississippi Coastal Management Zones.

4. Perennial streams shall not be filled/relocated for construction of well pads, tank battery pads, or other similar structures.

5. No more than 300 linear feet of intermittent streams shall be filled/relocated for construction of well pads, tank battery pads, or other similar structures.

6. Streams shall be suitably culverted or bridged at all crossings. Each crossing shall be designed and constructed to maintain low flows to sustain the movement of aquatic species. If a bottomless culvert cannot be used, then the crossing shall be designed and constructed to minimize adverse effects to aquatic life movements.
Adverse impacts to perennial and intermittent stream bottom habitats shall be mitigated on-site to the maximum extent practicable.

7. When constructing access roads through wetlands or floodplains, one, at least 24-inch diameter, culvert shall be installed every 500 feet, at a minimum, to minimize disruption of normal hydrologic flow through the affected wetlands and floodplains.

8. All flowlines/pipelines from well sites shall be placed within existing road rights-of-way where practical; otherwise, adverse impacts from construction/maintenance of flowlines/pipelines shall be minimized to the maximum extent practical.

9. Access roads through all WOTUS shall be limited to a maximum width of 40 feet for all exploration and production sites. Access roads shall follow the existing rights-of-way whenever possible to minimize environmental impacts. Clearing of vegetation shall be kept to a minimum.

10. Best Management Practices (BMPs), such as those developed by the Natural Resources Conservation Service (NRCS) or United States Forest Service (USFS) for gravel and unimproved roads, shall be used in the construction of access roads.

[NOTE: Best Management Practice resources can be found on the Vicksburg District’s Regulatory Web Page, under “Resources”]: http://www.mvk.usace.army.mil/Missions/Regulatory/Permits.aspx

11. For wells located within a 100-year floodplain or adjacent to a natural waterway, a closed-loop drilling fluid system shall be used when drilling the well.

12. The permittee and associated operator, shall have in place sufficient plans and procedures to prevent and control accidental spills of oil and similar substances at the site. Containment basin dikes around the pump, treater, and tank battery shall be constructed and maintained in accordance with applicable State and Federal regulations including 40 CFR 112 (Spill Prevention Control and Counter Measures Plan). USACE shall be notified of any accidental spill by contact to the Vicksburg District Regulatory office within 48 hours of discovery (601-631-7071; Regulatory@usace.army.mil). Applicable State environmental protection agencies shall be contacted according to State response plan requirements.

13. The permittee must construct and operate the facility in a manner that shall not interfere with navigation. The permitted structure shall be marked and/or lighted according to U.S. Coast Guard regulations.
14. No activity shall be authorized under this General Permit which is likely to directly or indirectly jeopardize the continued existence of a federally listed threatened or endangered species or a species proposed for such designation, as identified under the federal Endangered Species Act (ESA), or which will directly or indirectly destroy or adversely modify the critical habitat of such species. No activity shall be authorized under this General Permit which "may affect" a listed species or critical habitat, unless Endangered Species Act, Section 7 consultation addressing the effects of the proposed activity has been completed.

15. Activities in WOTUS that serve as breeding areas for migratory birds must be avoided to the maximum extent practicable. The permittee is responsible for obtaining any “take” permits required under the U.S. Fish and Wildlife Service’s regulations governing compliance with the Migratory Bird Treaty Act or the Bald and Golden Eagle Protection Act. The permittee should contact the appropriate local office of the U.S. Fish and Wildlife Service to determine if such “take” permits are required for a particular activity.

16. No activity that has the potential to cause effects to properties listed, or eligible for listing, in the National Register of Historic Places, or a site that has previously been unevaluated, shall be authorized by this General Permit until the requirements of Section 106 of the National Historic Preservation Act have been satisfied. Fill material shall not be taken from a known historical or archaeological site within or outside of regulated areas. If the permittee, during prosecution of work authorized herein, inadvertently discovers or accidentally destroys a cultural resource such as a cemetery, shipwreck, mound, historic structure, or archaeological site, within the area subject to Department of the Army jurisdiction, they shall cease work in the immediate area and notify the District Engineer within 24 hours. The District Engineer, in consultation with the appropriate State Historic Preservation Office and the Federally recognized Tribe, will comply with the procedures set forth in 33 CFR 325, Appendix C, paragraph 11 (Historic Properties Discovered During Construction).

17. Projects located on property encumbered by an NRCS Wetlands Reserve Program (WRP) easement shall not be authorized without written release/approval from the NRCS. Under such situations, the application shall not be considered complete until the Corps is provided written documentation of release/approval from the agreement by the NRCS.

18. Activities shall not be authorized on a property/area owned or managed by a State or Federal natural resource agency (e.g. wildlife management areas (WMAs), national wildlife refuges (NWRs), national forests, etc.) without documented approval (e.g. special use permit, waiver, etc.) by the managing agency.
19. Activities shall not be authorized for work proposed on or adjacent to any stream in a component of a National Wild and Scenic Rivers System or in a component of a State Natural and Scenic Rivers System, without the appropriate Federal or State authorization.

20. Site restoration after completion of construction and exploration (drilling) activities shall be as follows: Within 60 days after construction, and removal of the drilling rig (when applicable), all areas not needed for testing and production facilities shall be restored to original contours and revegetated as appropriate.

The District Engineer may extend the 60-day period, when justified, and where appropriate, after consultation with any applicable State or Federal land-managing agency (i.e. WMAs, NWRs, etc.).

21. The permittee/operator shall return a separate Certification of Compliance after completing construction of the authorized activity; and after completing exploration activities and site restoration (See Special Condition 20, above).

22. Any conditions on the water quality certifications issued from the State in which the work is proposed shall be incorporated by reference. Enforcement actions resulting from noncompliance with these conditions may be initiated by the State or the Environmental Protection Agency.

23. Proper procedures, in accordance with Federal, State and local regulations, shall be used to manage and dispose of waste generated at the site.

24. Authorizations for this General Permit shall not be granted to an applicant who is in noncompliance with a Department of the Army permit until such noncompliance has been resolved.

General Conditions:

a. You must maintain the activity authorized by the permit in good condition and in conformance with the terms and conditions of the permit. You are not relieved of this requirement if the permitted activity is abandoned. However, a good faith transfer to a third party in compliance with General Condition “b.”, below, would be acceptable. Should you desire to abandon the authorized activity without a good faith transfer, or should you wish to cease to maintain the authorized activity, you must obtain a modification of the authorization from this office, which may require restoration of the area.

b. If you sell the property associated with the authorization under this General Permit, you must notify this office to ensure that the authorization is transferred to the new owner.
c. You must allow representatives from this office to inspect the authorized activity at any time deemed necessary to ensure that it is being, or has been, accomplished in accordance with the terms and conditions of your permit.

d. This permit does not obviate the need to obtain other Federal, State, or local authorizations required by law.

e. This permit does not grant any property rights or exclusive privileges.

f. This permit does not authorize any injury to the property or rights of others.

g. This permit does not authorize interference with, or damages to, any existing or proposed Federal Civil Works project. An activity that requires Section 408 permission (Activities Affecting Structures or Works Built by the United States, 33 U.S.C. 408) is not authorized by GP-19 until the appropriate Corps office issues the Section 408 permission to alter, occupy, or use the USACE Civil Works project, and the District Engineer issues a written GP-19 authorization.

h. In issuing this permit, the Federal Government does not assume any liability for the following:

   (1) Damages to the permitted project, or uses thereof, as a result of other permitted or unpermitted activities or from natural causes.

   (2) Damages to the permitted project or uses thereof as a result of current or future activities undertaken by, or on behalf of, the United States in the public interest.

   (3) Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit.

   (4) Design or construction deficiencies associated with the permitted work.

   (5) Damage claims associated with any future modification, suspension, or revocation of this permit.

i. In issuing individual authorization under this General Permit, the Government shall rely on the information and data, which the permittee provides in connection with his permit application. If, subsequent to the authorization, such information and data prove to be false, incomplete, or inaccurate, this authorization may be modified, suspended, or revoked, in whole or in part, and/or the Government may, in addition, institute appropriate legal proceedings.
j. The permittee must immediately notify the Corps of any unforeseen activities, including emergency activities, that are directly or indirectly associated with the authorized activity and that may require separate authorization.

k. The General Permit is valid for five years from its effective date. At the end of that time, the cumulative environmental effects of completed work will be reviewed and reissuance of the permit may be considered. However, if unforeseen adverse environmental effects result from the issuance of this General Permit, it may be modified or terminated at any time.

l. Authorization under this General Permit is valid until the General Permit expires. Activities which are under construction, or that are under contract to commence in reliance upon this General Permit, will remain authorized provided the regulated activity is completed within 12 months of the date of the authorization.

Jennifer A. Mallard  
Chief, Regulatory Branch

Enclosure
April 1, 2019

Colonel Michael C. Derosier, District Commander
U.S. Army Corps of Engineers
4155 Clay Street
Vicksburg, MS 39183-3435

RE:  401 Water Quality Certification - MVK-2018-0683
     Re-issuance of General Permit 19

Dear Colonel Derosier:

ADEQ – Office of Water Quality (OWQ) has completed review of the above referenced public notice for the re-issuance of the U.S. Army Corps of Engineers General Permit 19 affecting the State of Arkansas.

ADEQ - OWQ has determined that there is a reasonable assurance that this activity will be conducted in a manner which, according to the Arkansas Pollution Control and Ecology Commission (APC&EC) Regulation No. 2, will not physically alter a significant segment of the waterbody and will not violate the water quality criteria.

Pursuant to §401(a)(1) of the Clean Water Act, the ADEQ hereby issues water quality certification for the referenced project, MVK-2018-0683, contingent upon the following conditions:

1. Individual Water Quality Certification requests must be submitted to ADEQ - OWQ for any activity impacting Extraordinary Resource Waters, Ecologically Sensitive Waters, and Natural and Scenic Waters as identified in APC&EC Regulation No. 2.
2. The applicant shall contact ADEQ - OWQ for a Short Term Activity Authorization (STAA) needs evaluation for activities which may violate water quality criteria.
3. The applicant shall comply with Arkansas Oil and Gas Commission (AOGC), General Rules and Regulations, Rule B-17 for reserve pits as applicable.
4. If a construction site will disturb equal to or greater than one (1) acre and less than five (5) acres, the applicant shall comply with the requirements in Reg. 6.203 for stormwater discharge associated with a small construction site, as defined in APC&EC Regulation No. 6. If the construction site will disturb five (5) acres or more, the applicant shall comply with the terms of the Stormwater Construction General Permit Number ARR150000 prior to the start of construction. BMPs must be implemented regardless of the size.
In issuing this certification, ADEQ does not assume any liability for the following:

1. Damages to the proposed project, or uses thereof, as a result of other permitted or unpermitted activities or from natural causes.
2. Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity specified in this certification.
3. Design or construction deficiencies associated with this proposed project.

Please contact Melanie Treat of ADEQ - OWQ at (501) 682-0040 if you have any questions regarding this certification.

Sincerely,

Bryan Leamons, P.E.
Senior Operations Manager, Office of Water Quality

RE: Renewal of the General Permit 19 (GP-19)
Regulated Activities in Waters of the United States Associated with the Exploration for and Subsequent Production of Hydrocarbons
Water Quality Certification WQC 190123-01
Corps of Engineers Permit MVK-2018-0683

Dear Ms. Mallard:

The Louisiana Department of Environmental Quality, Water Permits Division (LDEQ), has reviewed the application for structures or work affecting navigable waters of the United States and discharges of dredged and/or fill material in waters of the United States, which are associated with the exploration for, and subsequent production of, hydrocarbons within the boundaries of the Vicksburg District in the state of Louisiana.

The information provided in the application has been reviewed in terms of compliance with State Water Quality Standards, the approved Water Quality Management Plan and applicable state water laws, rules and regulations. LDEQ determined that the requirements for a Water Quality Certification have been met. LDEQ concludes that the placement of fill will not violate water quality standards as provided for in LAC 33: IX. Chapter 11. Therefore, LDEQ hereby issues U.S. Army Corps of Engineers, Vicksburg District Water Quality Certification, WQC 190123-01 for the General Permit 19.

Should you have any questions concerning any part of this certification, please contact Elizabeth Hill at (225) 219-3225 or by email at elizabeth.hill@la.gov. Please reference Agency Interest (AI) number 116705 and Water Quality Certification 190123-01 on all future correspondence to this Department to ensure all correspondence regarding this project is properly filed into the Department’s Electronic Document Management System.

Sincerely,

Scott Guilliams
Administrator
Water Permits Division

Certified Mail No. 7017 1450 0000 4592 1442
Ms. Jennifer Mallard
U.S. Army Corps of Engineers
Vicksburg District
4155 Clay Street
Vicksburg, MS 39183-3435

Dear Ms. Mallard:

Re: U.S. Army Corps of Engineers
Vicksburg District
General Permit 19
Warren County

Pursuant to Section 401 of the Federal Water Pollution Control Act (33 U.S.C. 1251, 1341), the Office of Pollution Control (OPC) issues this Certification, after public notice and opportunity for public hearing, to the U.S. Army Corps of Engineers, Vicksburg District, an applicant for a Federal License or permit to conduct the following activity:

U. S. Army Corps of Engineers, Vicksburg District, General Permit 19: Reissuance of a Department of the Army General Permit General Permit 19, with modifications, for structures or work affecting navigable waters of the United States and discharges of dredged and/or fill material in waters of the United States, which are associated with the exploration for and subsequent production of hydrocarbons. These activities include the construction of related items such as access roads, initial flowlines, mud and reserve pits, and associated levees; the construction of earthen mounds (pads) for the pump, treater, and tank battery; and the construction of a firewall around the tank battery.

General Permits may be issued for a category or categories of activities when: (1) those activities are substantially similar in nature and cause only minimal individual and cumulative environmental impacts; or (2) the General Permit would result in avoiding unnecessary duplication of the regulatory control exercised by another Federal, State, or local agency, provided it has been determined that the environmental consequences of the action are individually and cumulatively minimal.
This General Permit contains certain limitations intended to protect the environment and natural and cultural resources. Wetland impacts associated with regulated activities authorized under this General Permit shall be limited to a maximum of 5.0 acres for all work (including all portions of access roads, well pads, utility lines, etc.) that requires a Department of the Army authorization. This General Permit shall not be used to authorize water withdrawals, the construction of ponds for the storage of hydraulic fracturing water, or the construction of brine disposal wells.

The following must be provided by the applicant in writing in request for authorization under the General Permit:

a. State the number of the General Permit under which the work will be conducted. (General Permit - 19) (GP-19)

b. Statement that the work will be conducted in compliance with the terms and conditions of GP-19 and will not adversely impact adjoining properties.

c. A location description including: latitude and longitude, Section, Township, Range, County or Parish, and State; a plan-view (including a digital aerial overlay) location map showing the proposed worksite, existing wells, roads, and streams within 1,500 feet of the proposed site; a USGS quadrangle map depicting the area of potential development; a map showing FEMA flood zone ratings for project area and the location of the proposed well(s), flowline, and proposed access road(s).

d. Any application associated with a well site that was previously authorized by a Department of the Army permit will reference the Vicksburg District permit identification number (MVK-Year-XXXX) for that well site authorization.

e. Estimated starting date, and estimated time duration to completion of the drilling phase (when applicable), or other construction activity in/affecting WOTUS.

f. Name, mailing address, telephone number, and email address of the party (person and agency) applying for authorization, the operator of the well and the well number (please name and/or number any offset sites included in each application).

g. A drawing of the proposed structures (tank batteries, wells, access roads, etc.) including elevations (when available), dimensions (in feet), total area impacted (in acres for wetlands; in both acres and linear feet for streams), amounts of excavated and fill material (in cubic yards).

h. A delineation of wetlands, other special aquatic sites, and other waters, such as lakes and ponds, and perennial, intermittent, and ephemeral streams, on the project site. Wetland delineations will be prepared in
accordance with the current method required by the Corps. The applicant may ask the Corps to delineate the special aquatic sites, including wetlands, and other waters on the project site, but there may be a delay if the Corps does the delineation, especially if the project site is large or contains many waters of the United States. Furthermore, the application evaluation period will not start until the delineation has been submitted by the applicant or completed by the Corps, as appropriate.

i. An informational narrative and/or list detailing the individual aquatic resource impacts (in acres for wetlands; in acres and linear feet for streams), and the total impacts for each resource type (e.g. emergent wetland, forested wetland, intermittent stream, etc.), all impact activities (discharge of dredged and/or fill material, conversion, etc.), impact duration (temporary or permanent), and the latitude/longitude (approximate centerpoint) for each impact. In addition, current site photos of the WOTUS to be impacted should be provided.

[j NOTE: An Aquatic Resources Identification and Impacts Spreadsheet is available for use on the Vicksburg District's Regulatory Web Page]: https://www.mvk.usace.army.mil/Missions/Regulatory/Permits/

j. A narrative describing how impacts to WOTUS were minimized to the maximum extent practicable. For projects that include adverse impacts to WOTUS, the complete application will include information on mitigation in all forms (i.e. avoidance, minimization, and compensation) to minimize overall adverse impacts to WOTUS.

For projects with unavoidable adverse functional impacts greater than 0.10 acre to wetlands, the complete application will include a statement describing: how, if required, the compensatory mitigation requirement will be satisfied (either though purchase of mitigation credits from an approved mitigation bank or "in lieu fee" provider, or through permittee responsible mitigation); or explaining why the project-specific adverse effects are no more than minimal and why compensatory mitigation should not be required. As an alternative, the prospective permittee may submit a conceptual or detailed mitigation plan. If the applicant proposes permittee responsible mitigation, the application will not be considered complete until the Corps receives an acceptable permittee responsible mitigation plan.

[j NOTE: Information on the Vicksburg District's current mitigation requirements is available on the MVK Regulatory Web Page]: https://www.mvk.usace.army.mil/Missions/Regulatory/Mitigation/

k. The name(s) of those federally-listed endangered or threatened species that may be affected by the proposed work or that may utilize the designated critical habitat that may be affected by the proposed work.
l. For an activity that may affect a historic property listed on, determined to be eligible for listing on, or potentially eligible for listing on, the National Register of Historic Places, the application will state which historic property may be affected by the proposed work or include a vicinity map indicating the location of the historic property.

m. For work proposed on or adjacent to any stream in a component of a National Wild and Scenic Rivers System or in a component of a State Natural and Scenic Rivers System or on a property/area owned or managed by a State or Federal natural resource agency (e.g. wildlife management areas, national wildlife refuges, national forests, etc.), the applicant must submit with their request for authorization under this General Permit, the agency point of contact (including phone number, mailing address, and email address) and proof of initiation of the applicant's request for approval from the managing agency.

n. A description of the BMP's that will be used to minimize movement of disturbed soil(s) from the construction into adjacent WOTUS.

o. For enhanced oil recovery (EOR) projects, the application will include a map showing the land area beneath which the target formation will be pressurized. This map will also identify locations of existing wells that penetrate the affected formation. For these operations, the application will also include an affirmative statement that the identified existing wells have been inspected and determined to be capable of withstanding expected pressures.

p. For activities affecting structures or works built by the United States, if a GP-19 activity also requires permission from the Corps pursuant to 33 U.S.C. 408 because it will alter or temporarily or permanently occupy or use a USACE federally authorized Civil Works project, the application must include a statement (and any associate documents) confirming that the project proponent has submitted a written request for Section 408 permission to the Vicksburg District office having jurisdiction over that USACE project.

Special Conditions of the General Permit:

1. All proposals for hydrocarbon exploration/production activities shall reduce the area of impact to the minimum area absolutely necessary for construction. Unavoidable functional loss impacts exceeding 0.1 acre for wetlands, may require compensatory mitigation. See Application Requirements 'l.' and 'j.' (above) for information requirements that must be supplied to inform the District Engineer's determination of mitigation requirements.
2. No regulated activity may cause the permanent loss or conversion of greater than 0.5 acre of cypress swamp and/or cypress-tupelo swamp.

3. Projects shall not be authorized in areas included within the Louisiana or Mississippi Coastal Management Zones.

4. Perennial streams shall not be filled/relocated for construction of well pads, tank battery pads, or other similar structures.

5. No more than 300 linear feet of intermittent streams shall be filled/relocated for construction of well pads, tank battery pads, or other similar structures.

6. Streams shall be suitably culverted or bridged at all crossings. Each crossing shall be designed and constructed to maintain low flows to sustain the movement of aquatic species. If a bottomless culvert cannot be used, then the crossing should be designed and constructed to minimize adverse effects to aquatic life movements. Adverse impacts to perennial and intermittent stream bottom habitats shall be mitigated on-site to the maximum extent practicable.

7. When constructing access roads through wetlands or floodplains one culvert at least 24-inch diameter shall be installed every 500 feet, at a minimum, to minimize disruption of normal hydrologic flow through the affected wetlands and floodplains.

8. All flowlines/pipelines from well sites shall be placed within existing road rights-of-way where practical; otherwise, adverse impacts from construction/maintenance of flowlines/pipelines shall be minimized to the maximum extent practical.

9. The right-of-way for access roads through all jurisdictional waters of the United States shall be limited to a maximum width of 40 feet for all exploration and production sites. Access roads shall follow the existing rights-of-way whenever possible to minimize environmental impacts. Clearing of vegetation shall be kept to a minimum.

10. Best Management Practices (BMPs), such as those developed by NRCS or USFS for gravel and unimproved roads, shall be used in the construction of access roads.

[NOTE: Best Management Practice resources can be found on the Vicksburg District's Regulatory Web Page, under "Resources"]; http://www.mvk.usace.army.mil/Missions/Regulatory,Permits.aspx

11. For wells located within a 100-year floodplain or adjacent to a natural waterway, a closed-loop drilling fluid system shall be used when drilling the well.

12. The applicant and associated operator shall have in place sufficient plans and procedures to prevent and control accidental spills of oil and similar
substances at the site. Containment basin dikes around the pump, treater, and tank battery shall be constructed and maintained in accordance with applicable State and Federal regulations including 40 CFR 112 (Spill Prevention Control and Counter Measures Plan). USACE shall be notified of any accidental spill by contact to the Vicksburg District Regulatory office within 48 hours of discovery (601-631-7071; Regulatory@usace.army.mil). Applicable State environmental protection agencies shall be contacted according to State response plan requirements.

13. The permittee must construct and operate the facility in a manner that shall not interfere with navigation. The permitted structure shall be marked and/or lighted according to U.S. Coast Guard regulations.

14. No activity shall be authorized under this General Permit which is likely to directly or indirectly jeopardize the continued existence of a Federally listed threatened or endangered species or a species proposed for such designation, as identified under the Federal Endangered Species Act (ESA), or which will directly or indirectly destroy or adversely modify the critical habitat of such species. No activity shall be authorized under this General Permit which "may affect" a listed species or critical habitat, unless Endangered Species Act, Section 7 consultation addressing the effects of the proposed activity has been completed.

15. Activities in WOTUS that serve as breeding areas for migratory birds must be avoided to the maximum extent practicable. The permittee is responsible for obtaining any "take" permits required under the U.S. Fish and Wildlife Service's regulations governing compliance with the Migratory Bird Treaty Act or the Bald and Golden Eagle Protection Act. The permittee should contact the appropriate local office of the U.S. Fish and Wildlife Service to determine if such "take" permits are required for a particular activity.

16. No activity that has the potential to cause effects to properties listed, or eligible for listing, in the National Register of Historic Places, or a site that has previously been unevaluated, shall be authorized by this General Permit until the requirements of Section 106 of the National Historic Preservation Act have been satisfied. Additional fill material shall not be taken from a known historical or archaeological site within or outside of regulated areas. If the permittee, during prosecution of work authorized herein, inadvertently discovers or accidentally destroys a cultural resource such as a cemetery, shipwreck, mound, historic structure, or archaeological site, within the area subject to Department of the Army jurisdiction, they shall cease work in the immediate area and notify the District Engineer within 24 hours. The District Engineer, in consultation with the appropriate State Historic Preservation Office and the Federally recognized Tribe, will comply with the procedures set forth in 33 CFR...
17. Projects located on property encumbered by an NRCS Wetlands Reserve Program (WRP) easement shall not be authorized without written release/approval from the NRCS. Under such situations, the application shall not be considered complete until the Corps is provided written documentation of release/approval from the agreement by the NRCS.

18. Activities shall not be authorized on a property/area owned or managed by a State or Federal natural resource agency (e.g. wildlife management areas, national wildlife refuges, national forests, etc.) without documented approval (e.g. special use permit, waiver, etc.) by the managing agency.

19. Activities shall not be authorized for work proposed on or adjacent to any stream in a component of a National Wild and Scenic Rivers System or in a component of a State Natural and Scenic Rivers System, without the appropriate Federal or State authorization.

20. Site restoration after completion of Construction and Exploration (drilling) activities shall be as follows: Within 60 days after construction, and removal of the drilling rig (when applicable), all areas not needed for testing and production facilities shall be restored to original contours. Drilling mud shall be removed and disposed of according to State and Federal Regulations.

The District Engineer may extend the 60-day period, when justified, and where appropriate, after consultation with any applicable State or Federal land-managing agency (i.e. WMAs, NWRs, etc.).

21. The permittee/operator shall return a separate Certification of Compliance after completing construction of the authorized activity; and after completing exploration activities and site restoration (See Special Condition 20, above).

22. Any conditions on the water quality certifications issued from the State in which the work is proposed shall be incorporated by reference. Enforcement actions resulting from noncompliance with these conditions may be initiated by the State or the Environmental Protection Agency.

23. Proper procedures, in accordance with Federal, State and local regulations, shall be used to manage and dispose of waste generated at the site.

24. Authorizations for this General Permit shall not be granted to an applicant who is in noncompliance with a Department of the Army permit until such noncompliance has been resolved.

This certification is valid for projects within the Vicksburg District of the State of Mississippi [MVK2018683, WQC2019004].
The Office of Pollution Control certifies that the above-described activity will be in compliance with the applicable provisions of Sections 301, 302, 303, 306, and 307 of the Federal Water Pollution Control Act and Section 49-17-29 of the Mississippi Code of 1972, if the applicant complies with the following conditions:

1. The Department of Environmental Quality (MDEQ) shall be provided a copy of the final permit and associated enclosures and attachments.

2. The permittee obtaining authorization under General Permit-19 shall obtain appropriate wastewater permits and/or approvals for the proposed activity prior to the commencement of construction activities.

3. Prior to the start of any water withdrawal activities, the permittee obtaining authorization under General Permit-19 shall obtain the appropriate water withdrawal permits from the Office of Land and Water Resources within MDEQ.

4. All stream impacts (including streams identified as ephemeral by the U.S. Army Corps of Engineers and described as non-relatively permanent waters) shall be mitigated in kind with stream mitigation elements. In the event that stream mitigation is not available and alternate mitigation proposals are provided, a pre-construction notification shall be provided to MDEQ and 10 working days shall be allowed to provide comments.

5. A pre-construction notification shall be provided to MDEQ for projects that include channel work within waterways found on the latest version of the State of Mississippi’s Section 303(d) List of Impaired Water Bodies for sediment or biological impairment or waterways with a completed Total Maximum Daily Load (TMDL) for sediment or biological impairment. This notification shall include the following:
   a. Justification of why the impacts cannot be avoided;
   b. Proposed best management practices that would minimize the impacts to receiving sensitive waters; and
   c. Compensatory mitigation primarily along the same reach of stream or on another impaired stream within the same drainage basin.

6. Discharges of cuttings, drilling mud, hydrostatic testing water, or any other waste material are prohibited unless approved in writing or permitted by the MDEQ.

7. A pre-construction notification shall be provided to MDEQ for projects associated with hydraulic fracturing and enhanced oil recovery using carbon dioxide for oil and gas exploration. Unless verification is provided that the proposed activities have been previously reviewed and approved through a master planning process, MDEQ shall be allowed 10 working days to provide
comments for the proposed activities. For activities not previously included in an approved master planning process, the pre-construction notification to MDEQ shall include the following:

a. Impacts resulting from authorizations for oil and gas exploration shall be minimized to the maximum extent practicable;
b. A mitigation plan for unavoidable impacts shall be provided and should be within the same watershed as practicable;
c. All fill shall be removed in the event that production is not achieved; and
d. A plan for restoring the sites in the event production is not achieved.

8. No sewage, oil, refuse, process wastewaters, or other pollutants shall be discharged.

9. The turbidity outside the limits of a 750-foot mixing zone shall not exceed the ambient turbidity by more than 50-Nephelometric Turbidity Units.

The Office of Pollution Control also certifies that there are no limitations under Section 302 nor standards under Sections 306 and 307 of the Federal Water Pollution Control Act which are applicable to the applicant's above-described activity.

This certification is valid for the project as proposed. Any deviations without proper modifications and/or approvals may result in a violation of the 401 Water Quality Certification. If we can be of further assistance, please contact us.

Sincerely,

Krystal Rudolph, P.E., BCEE
Chief, Environmental Permits Division
