The U.S. Army Corps of Engineers, Vicksburg District, is hereby reissuing a Department of the Army General Permit for the construction of recreational boating facilities and the associated discharge of dredged and/or fill material into waters of the United States within the regulatory jurisdiction of the Vicksburg District in the States of Arkansas, Louisiana, and Mississippi. Typical activities include construction of boat ramps, parking areas, access roads, fishing piers, and associated facilities requiring placement of dredged and/or fill material into waters of the United States. A map of the Vicksburg District (enclosure 1) and typical construction drawings (enclosure 2) are enclosed.

This General Permit contains certain limitations intended to protect the environment and natural and cultural resources. Conformance with conditions contained in the General Permit does not necessarily guarantee authorization under this General Permit. In cases where the District Engineer considers it necessary, an application for an individual permit will be required. Construction, dredging, or fill operations not specifically authorized by this General Permit are prohibited unless authorized by a separate permit.

This action is being taken pursuant to Federal regulations printed in the Federal Register on November 13, 1986, concerning permits for activities in waters of the United States. These regulations state the U.S. Army Corps of Engineers' responsibility for regulating structures or work in or affecting waters of the United States under Section 10 of the Rivers and Harbors Act of 1899 (30 Stat. 1151; 33 U.S.C. 403) and Section 404 of the Clean Water Act (33 U.S.C. 1344).
General Permits may be issued for a category or categories of activities when: (1) those activities are substantially similar in nature and cause only minimal individual and cumulative environmental impacts; or (2) the General Permit would result in avoiding unnecessary duplication of the regulatory control exercised by another Federal, State, or local agency, provided it has been determined that the environmental consequences of the action are individually and cumulatively minimal. The final decision regarding a determination that the proposed activities comply with the requirements for issuance of General Permits was made using information which is available for inspection at the offices of the Vicksburg District’s Regulatory Branch at 4155 Clay Street, Vicksburg, Mississippi.

In compliance with requirements of Section 401 of the Clean Water Act, the Vicksburg District has obtained water quality certifications (WQCs) from the Arkansas Department of Environmental Quality, the Louisiana Department of Environmental Quality, and the Mississippi Department of Environmental Quality stating that the work authorized by the General Permit will not violate applicable provisions of Sections 301, 302, 306, and 307 of the Act. A copy of the Arkansas, Louisiana, and Mississippi water quality certifications are attached (enclosure 3).

Authorization to conduct work under this General Permit does not negate the responsibility of the applicant to obtain other State or local authorizations or permits required by law for the proposed activity.

REQUEST FOR AUTHORIZATION UNDER THE GENERAL PERMIT: IN ORDER TO BE AUTHORIZED BY THIS GENERAL PERMIT, PARTIES PROPOSING THE WORK ARE REQUIRED TO SUBMIT TO THE DISTRICT ENGINEER, IN WRITING, THE FOLLOWING INFORMATION IN 8 ½ x 11 INCH FORMAT AT LEAST 60 DAYS PRIOR TO CONDUCTING THE WORK:

a. State the number of the General Permit under which the work will be conducted. (General Permit - 25)

b. A statement that the work will be conducted in compliance with the terms and conditions of the General Permit and will not adversely impact adjoining properties.

c. Name, mailing address, telephone number, and e-mail address of the party (person/agency) applying for authorization and for the agent (if applicable).

d. A location map showing the proposed worksite (including latitude and longitude, Section, Township, Range, County or Parish, and State).

e. A description of the proposed activity and its purpose, including an explanation of the current conditions at the site that need to be corrected/modified/improved and how the proposed activity will meet those needs.
f. A sufficiently labeled drawing of any proposed structures to illustrate elevations (when available), dimensions, total area impacted in acres, and amounts of excavated and fill material in cubic yards.

g. Estimated initiation and completion dates of construction.

h. A delineation of all waters of the United States (WOTUS) within the project area, including special aquatic sites (e.g. wetlands) and other waters of the U.S. such as lakes or ponds, or perennial, intermittent, or ephemeral streams. Wetland delineations must be prepared in accordance with the current method required by the Corps. The applicant may ask the Corps to delineate the special aquatic sites, including wetlands, and other waters on the project site, but there may be a delay, especially if the project site is large or contains many waters of the United States. Furthermore, the application evaluation period will not start until the delineation has been submitted by the applicant or completed by the Corps, as appropriate.

i. An impact table detailing the total impacts in acres (wetland) or linear feet (stream), type of wetland(s) or stream(s) to be impacted, impact activity (discharge of dredged or fill material, conversion, etc.), impact duration (temporary or permanent), and the latitude/longitude for each impact.

[NOTE: An Impact Table template is available for use on the Vicksburg District’s Regulatory Web Page]:
http://www.mvk.usace.army.mil/Missions/Regulatory/Permits.aspx

j. The application must include a description of best management practices that will be used to minimize movement of disturbed soil(s) from the project site into adjacent areas.

k. For projects that include adverse impacts to waters of the U.S., the complete application must include information on mitigation in all forms (i.e. avoidance, minimization, and compensation) to minimize overall adverse impacts to waters of the U.S. For projects with unavoidable impacts greater than 0.10 acre to wetlands, the complete application must include a conceptual mitigation plan stating whether compensatory mitigation requirements as determined by the Corps will be provided through: (1) purchase of mitigation credits from an approved bank or approved “in lieu fee” provider, or (2) permittee responsible mitigation. If the applicant proposes permittee responsible mitigation, the application will not be considered complete until the Corps received an acceptable permittee responsible mitigation plan.

[NOTE: Information on the Vicksburg District’s current mitigation requirements is available on the MVK Regulatory Web Page]:
http://www.mvk.usace.army.mil/Missions/Regulatory/Mitigation.aspx
I. If the proposed activity would occur within 1500 linear feet of a federal flood control levee, the application would include an affirmative statement that the applicant has also submitted a permit application to the appropriate agency that manages the levee (i.e. levee district, board, commission).

m. If any Federally-listed, or candidate, threatened or endangered species are near the project area, or if the project area is located in designated critical habitat for a listed species, the application must include the name(s) of those listed species or candidate species. If individuals, evidence of individuals, and/or suitable habitat are present at the project site, the application must describe all measures that will be implemented to avoid impacts to these resources.

n. The application must state if there is a known migratory wading bird rookery site or an American bald or golden eagle nest site near the project location. If individuals, evidence of individuals, and/or suitable habitat are present at the project site, the application must describe all measures that will be implemented to avoid impacts to these resources.

o. For an activity that may affect a historic property listed on, determined to be eligible for listing on, or potentially eligible for listing on the National Register of Historic Places, the application must state which historic property may be affected by the proposed work or include a vicinity map indicating the location of the historic property.

p. If the proposed activity is located within the Coastal Zone area of Louisiana or Mississippi, the complete application would also include an approval (e.g. waiver or coastal use permit) from the coastal zone management agency (see Special Condition ‘k.’).

Upon receipt of this information, the District Engineer will evaluate the proposal and notify the inquiring party, in writing, either that the work will be authorized under the General Permit; will require additional information or will advise the inquiring party that the proposed activity will require an individual permit.

Special Conditions:

a. The authorized structures shall not extend into the channel of the receiving waterbody so as to interfere with navigation (including recreational boating) or adversely affect the flow-carrying capacity of the receiving waterbody.

b. Wetland impacts from the proposed construction and fill activities shall not exceed two acres.

c. Adequate best management practices are required. All construction activities shall be performed in a manner that will prevent off-site movement of disturbed soils, minimize increased turbidity of the water in the work area, and
otherwise avoid adverse effects on water quality and aquatic life, especially during fish spawning seasons. The fill material shall be compacted upon completion of construction. The site shall be revegetated by sod, seed, or another acceptable method, as necessary, to restore cover and prevent erosion. In areas subject to currents, riprap may be used for slope protection.

d. Material used for fill may be obtained from site preparation. Additional fill may be obtained from an upland source and shall be nonpolluting, in conformance with (l.), below. Additional material shall not be obtained from any wetland and/or other waters of the United States (WOTUS) or any area which would affect an adjacent wetland and/or other WOTUS.

e. Fill placed outside of the footprint of the structures authorized by this General Permit should be similar in nature to the existing substrate and shall be confined to the minimum quantity necessary. The parking area shall be the minimum size necessary to accommodate users of the facility. The access road shall be aligned to minimize impacts to WOTUS.

f. The slope of the ramp shall be designed to provide safe launching conditions.

g. Construction and/or maintenance activities should be conducted during drawdown periods of lakes/reservoirs, when practicable, or during low flow periods of free flowing streams.

h. No activity that may adversely impact a site listed in or eligible for listing in the National Register of Historic Places, or a site that has previously been unevaluated, shall be allowed by this General Permit. Additional fill material shall not be taken from a known historical or archaeological site within or outside of regulated areas. If the permittee, during prosecution of activities authorized herein, inadvertently discovers or accidently destroys a cultural resource such as a cemetery, shipwreck, mound, historic structure, or archaeological site, within the area subject to Department of the Army jurisdiction, they shall cease work in the immediate area and notify the District Engineer within 24 hours. The District Engineer, in consultation with the appropriate State Historic Preservation Officer and the Federally recognized Tribe, will comply with the procedures set forth in 33 CFR 325, Appendix C, paragraph 11 (Historic Properties Discovered During Construction).

i. If damage to a revetment were to occur as a result of activities authorized in accordance with this General Permit, the permittee shall be required to make necessary repairs at their own expense. These repairs must meet specifications designated by the District Engineer.
j. Activities shall not be authorized for activities proposed on or adjacent to any stream in a component of a National Wild and Scenic Rivers System or in a component of a State Natural and Scenic Rivers System, without the appropriate Federal or State authorization.

k. The discharge shall not occur in a Coastal Zone Management area without the appropriate State authorization. The coastal zone approval shall be submitted with the request for authorization under this General Permit. Therefore, in order to be authorized by this General Permit for activities in Hancock County, Mississippi, or St. Tammany Parish, Louisiana, persons planning activities in these coastal areas should first send complete plans to the appropriate state agency at one of the following addresses:

Mississippi Department of Marine Resources
1141 Bayview Avenue
Suite 101
Biloxi, Mississippi  39530

Louisiana Department of Natural Resources
Office of Coastal Management
Post Office Box 44487
Baton Rouge, Louisiana  70804-4487

l. Dredged, excavated, or fill material used for construction shall be nonpolluting material in accordance with the Environmental Protection Agency Guidelines for the Discharge of Dredged or Fill Material found in 40 CFR 230.

m. All excavated material not used as backfill shall be placed in a non-jurisdictional area (i.e., upland). If excavated material is to be placed in an upland contained disposal area and return water discharged back into waters of the United States, a separate Department of the Army authorization may be required (See Nationwide Permit No. 16).

n. The discharge shall not be located so as to adversely affect a public water supply intake or a national fish hatchery intake.

o. The discharge shall not contain unacceptable levels of pathogenic organisms in areas used for activities involving physical contact with the water.

p. The discharge shall not occur in areas of concentrated shellfish production.

q. No activity shall be authorized under this General Permit that would be likely to directly or indirectly jeopardize the continued existence of a Federally-listed threatened or endangered species or a species proposed for such designation, as identified under the Federal Endangered Species Act (ESA), or that will directly or indirectly destroy or adversely modify the critical habitat of
such species. No activity shall be authorized under this General Permit which “may affect” a listed species or critical habitat, unless Section 7 consultation addressing the effects of the proposed activity has been completed.

r. The permittee is responsible for obtaining any “take” permits required under the U.S. Fish and Wildlife Service’s regulations governing compliance with the Migratory Bird Treaty Act or the Bald and Golden Eagle Protection Act. The permittee shall contact the appropriate local office of the U.S. Fish and Wildlife Service to determine if such “take” permits are required for the activity.

s. No activities shall be performed within 1,500 feet of any known wading bird rookery.

t. The construction activity shall not result in the relocation or blockage of a natural stream or river channel or adversely impact or drain wetlands and/or waters of the United States.

u. No sewage, oil, refuse, or other pollutants shall be discharged into the waterbody.

v. Activities shall not be authorized on a property/area managed or encumbered by a state or federal natural resource agency (e.g. wildlife management areas, national wildlife refuges, national forests, wetland or conservation reserve program properties, etc.) without documented approval (e.g. special use permit, waiver, etc.) from that agency.

w. Authorizations for this General Permit shall not be granted to an applicant who is in noncompliance with a Department of the Army permit until such noncompliance has been resolved.

x. Any conditions on the water quality certifications issued from the State in which the activities are proposed shall be incorporated by reference. Enforcement actions resulting from noncompliance with these conditions may be initiated by the State or the Environmental Protection Agency.

y. Authorized discharges shall not occur in sites that will adversely affect areas supporting tidal waters or tidally-influenced wetlands.

General Conditions:

a. You shall maintain the activity authorized by the permit in good condition and in conformance with the terms and conditions of the permit. You are not relieved of this requirement if the permitted activity is abandoned. However, a good faith transfer to a third party in compliance with General Condition b., below, will be acceptable. If you desire to abandon the authorized activity without a good faith transfer, or wish to cease to maintain the authorized activity,
you must obtain a modification of the authorization from this office, which may require restoration of the area.

b. If you sell the property associated with the authorization under this General Permit, you shall notify this office to ensure that the authorization is transferred to the new owner.

c. Representatives from this office shall be allowed to inspect the authorized activity at any time deemed necessary to ensure that it is being, or has been, accomplished in accordance with the terms and conditions of the permit.

d. This permit does not obviate the need to obtain other Federal, State, or local authorizations required by law.

e. This permit does not grant any property rights or exclusive privileges.

f. This permit does not authorize any injury to the property or rights of others.

g. This permit does not authorize interference with or damages to any existing or proposed Federal project.

h. In issuing this permit, the Federal Government does not assume any liability for the following:

   (1) Damages to the permitted project, or uses thereof, as a result of other permitted or unpermitted activities or from natural causes.

   (2) Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the United States in the public interest.

   (3) Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit.

   (4) Design or construction deficiencies associated with the permitted work.

   (5) Damage claims associated with any future modification, suspension, or revocation of this permit.

i. In issuing individual authorization under this General Permit, the Government will rely on the information and data that the permittee provides in connection with the permit application. If, subsequent to the authorization, such information and data prove to be false, incomplete, or inaccurate, this authorization may be modified, suspended, or revoked, in whole or in part, and/or the Government may, in addition, institute appropriate legal proceedings.
j. The permittee shall immediately notify the Corps of any unforeseen activities, including emergency activities, that are directly or indirectly associated with the authorized activity and that may require authorization by a separate Department of the Army permit.

k. This General Permit is valid for 5 years. At the end of that time, the cumulative environmental effects of completed work will be reviewed and reissuance of the permit may be considered. However, if unforeseen adverse environmental effects result from the issuance of this General Permit, it may be modified or terminated at any time.

l. Authorizations under this General Permit are valid until the General Permit expires. Authorized activities that are under construction, or that are under contract to commence construction, in reliance upon this General Permit, will remain authorized provided the activity is completed within 12 months of the date of expiration.

Additional copies of this notice are available upon request from this office. Requests may be addressed to: USACE, Attention: Regulatory Branch, 4155 Clay Street, Vicksburg, Mississippi 39183-3435.

Vicksburg, MS 39183-3435

Dear Colonel Cross:

The Arkansas Department of Environmental Quality ("ADEQ") has completed its review of the above referenced public notice for re-issuance of the U.S. Army Corps of Engineers General Permit 25 for the State of Arkansas.

ADEQ has determined that there is a reasonable assurance that this activity will be conducted in a manner which, according to the Arkansas Pollution Control and Ecology Commission’s Regulation No. 2, will not physically alter a significant segment of a waterbody and will not violate the water quality criteria.

Pursuant to §401(a)(1) of the Clean Water Act, the ADEQ hereby issues water quality certification for this project contingent upon the following conditions:

1) Individual Water Quality Certification requests must be submitted to ADEQ for any activity impacting Extraordinary Resource Waters, Ecologically Sensitive Waters, and Natural and Scenic Waters as identified in Regulation # 2.

2) Individual water quality certification requests must be submitted to ADEQ for any activity located on tributaries within 1/10 mile of an Extraordinary Resource Waters, Ecologically Sensitive Waters, and Natural and Scenic Waters as identified in Arkansas Pollution Control and Ecology Commission’s Regulation No. 2.

3) Individual water quality certification request must be submitted to ADEQ for any activity impacting a waterbody listed as impaired for turbidity on the Arkansas 303(d) List.

4) The applicant shall contact ADEQ for a Short Term Activity Authorization needs determination for activities that have the potential to violate water quality criteria.

5) The applicant shall comply with NPDES Storm Water Program requirements.
Please contact Mark Hathcote of the Water Division at (501) 682-0028 if you have any questions regarding this certification.

Sincerely,

Ellen Carpenter
Chief, Water Division

RE: Corps of Engineers Permit MVK-2014-459  
Water Quality Certification WQC 140610-01

Dear Ms. Mallard:

The Louisiana Department of Environmental Quality, Water Permits Division (LDEQ), has reviewed the application to reissue the Department of the Army General Permit and Louisiana Water Quality Certification for construction of recreational boating facilities and the associated discharge of dredged and/or fill material within the jurisdiction of the Vicksburg District.

Based on the information provided in the application, LDEQ has determined that the requirements for a Water Quality Certification have been met. LDEQ concludes the placement of fill material will not violate water quality standards as provided for in LAC 33:IX.Chapter 11. Therefore, LDEQ hereby issues the U.S. Army Corps of Engineers – Vicksburg District Water Quality Certification, WQC 140610-01.

Should you have any questions concerning any part of this certification, please contact Elizabeth Johnson at (225) 219-3225, or by email at elizabeth.johnson@la.gov. To ensure all correspondence regarding this certification is properly filed into the Department’s Electronic Document Management System, please reference Agency Interest (AI) number 116704 on all future correspondence to this Department.

Sincerely,

Scott Guilliams  
Administrator  
Water Permits Division

Certified Mail No. 7011 1570 0002 1131 2882

John W. Cross
Colonel, U.S. Army Corps of Engineers
District Commander
Vicksburg District
4155 East Clay Street
Vicksburg, Mississippi 39183-3435

Dear Colonel Cross:

Re: US Army COE,
Vicksburg District
General Permit 25
Warren County
WQC No. WQC2014031

Pursuant to Section 401 of the Federal Water Pollution Control Act (33 U.S.C. 1251, 1341), the Office of Pollution Control (OPC) issues this Certification, after public notice and opportunity for public hearing, to U.S. Army Corps of Engineers, Vicksburg District, an applicant for a Federal License or permit to conduct the following activity:

US Army COE, Vicksburg District, General Permit 25: Reissuance of a Department of the Army General Permit for construction of recreational boating facilities and the associated discharge of dredged and/or fill material in waters of the United States within the regulatory jurisdiction of the Vicksburg District. Typical activities would include construction of boat ramps, parking areas, access roads, fishing piers, and associated facilities requiring work and placement of dredged and/or fill material into waters of the United States. This proposed General Permit contains certain limitations intended to protect the environment and natural and cultural resources. Conformance with conditions contained in the General Permit does not necessarily guarantee authorization under this General Permit. In cases where the District Engineer considers it necessary, an application will be required for an individual permit. Construction, dredging, or fill operations not
specifically covered by this General Permit would be prohibited unless authorized by a separate permit. General Permits may be issued for a category or categories of activities when: (1) those activities are substantially similar in nature and cause only minimal individual and cumulative environmental impacts; or (2) the General Permit would result in avoiding unnecessary duplication of the regulatory control exercised by another Federal, State, or local agency, provided it has been determined that the environmental consequences of the actions are individually and cumulatively minimal.

The following must be provided by the applicant in writing in request for authorization under the General Permit:

a. State the number of the General Permit under which the work is to be conducted. (General Permit-19)

b. Statement that the work will be conducted in compliance with the terms and conditions of the General Permit and will not adversely impact adjoining properties.

c. Name, mailing address, telephone number, and email address of the party (person/company/agency) applying for authorization and for the agent (if applicable).

d. A location map showing the proposed worksite (including latitude, longitude, section, Township, Range, County or Parish, and State).

e. A description of the present conditions at the project site(s), including substrate type, vegetation type and coverage, existing structures, etc.

f. A description of the proposed activity, its purpose, and intended use.

g. A sufficiently labeled set of drawings of the proposed structures, excavations, and/or fills illustrating elevations (when available), dimensions, total area impacted in acres, and the quality and type(s) of excavated and/or fill material that would be used in cubic yards.

h. The estimated starting and completion dates of construction.

i. A delineation of wetlands, other special aquatic sites, and other waters (e.g. perennial, intermittent, ephemeral streams) in the work area. Wetland delineations would be prepared in accordance with current method required by the Corps. The applicant may ask the Corps to delineate the special aquatic sites, including wetlands, and other waters on the project site, but this may delay preparation/receipt of a complete application, especially if the
project site is large or contains many waters of the United States. Furthermore, the application evaluation period would not start until the delineation has been submitted by the applicant or completed by the corps, as appropriate.

j. If the proposed activity would occur within the Coastal Zone area of Louisiana or Mississippi, the complete application would also include an approval (e.g. waiver or coastal use permit) from the coastal zone management agency (see Special Condition ‘j.’).

k. If the proposed work would occur within 1500 linear feet of a federal flood control levee, the application would include an affirmative statement that the applicant has also submitted a permit application to the appropriate agency that manages the levee (i.e. levee district, board, commission).

l. For projects that would include adverse impacts to waters of the U.S., the complete application would include information on mitigation in all forms (i.e. avoidance, minimization, and compensation) to minimize overall adverse impacts to waters of the U.S. For projects with unavoidable impacts greater than 0.10 acre to wetlands, the complete application would include a conceptual mitigation plan stating whether compensatory mitigation requirements as determined by the Corps would be provided through: (1) purchase of mitigation credits from an approved mitigation bank or approved “in lieu fee” provider, or (2) permittee responsible mitigation. If the applicant proposes permittee responsible mitigation, the application would not be considered complete until the Corps received an acceptable permittee responsible mitigation plan.

[NOTE: Information on the Vicksburg District’s current mitigation requirements is available on the MVK Regulatory Web Page]: http://www.mvk.usace.army.mil/Missions/Regulatory/Mitigation.aspx

m. If any Federally-listed threatened or endangered species or candidate species are in the vicinity of the project area, or if the project area is located in designated critical habitat for a listed species, the application would include the name(s) of those listed species or candidate species. If individuals, evidence of individuals, and/or suitable habitat within an area designated as critical habitat are present at the project site, the application would describe all measures that would be implemented avoid impacts to those resources.

n. The application would state if there is a known migratory wading bird rookery site or an American bald or golden eagle nest site in the vicinity of the project location. If individuals or evidence of individuals are present at
the project site for any of these resources, the application would describe all measures that would be implemented to avoid impacts to these resources.

Special Conditions:

a. The authorized structures would not extend into the channel of the receiving waterbody so as to interfere with navigation (including recreational boating) or adversely affect the flow-carrying capacity of a river or stream. The parking area would be the minimum size necessary to accommodate users of the facility and would be surfaced with porous material such as gravel, crushed stone, shell, etc. The access road would be the minimum distance necessary to provide access to the boat ramp and parking area.

b. The slope of the ramp would be designed to provide safe launching conditions.

c. Construction and/or maintenance activities would be conducted during drawdown periods of lakes/reservoirs or during low flow periods of free-flowing streams.

d. Wetland impacts from the proposed construction and fill activities would not exceed two (2) acres.

e. Material used for fill could be obtained from an upland source and must be nonpolluting, in conformance with 'p.', below. The fill would not be obtained from an offsite wetland or in a manner that would adversely affect an offsite wetland.

f. No activity which may adversely impact a site listed or eligible for listing on National Register of Historic Places, or a site that has been previously been unevaluated, would be allowed by the General Permit. Additional fill material would not be taken from a known historical or archaeological site within or outside of regulated areas. If the permittee, during prosecution of work authorized herein, inadvertently discovers or accidentally destroys a cultural resource such as a cemetery, shipwreck, mound, historic structure, or archaeological site, within the area subject to Department of the Army jurisdiction, they would cease work in the immediate area and notify the District Engineer within 24 hours. The District Engineer, in consultation with the appropriate State Historic Preservation Officer and the Federally recognized Tribe, would comply with the procedures set forth in 33 CFR 325, Appendix C, paragraph 11 (Historic Properties Discovered During Construction).

g. No activity would be authorized under this General Permit which would be likely to directly or indirectly jeopardize the continued existence of a
Federally listed threatened or endangered species or a species proposed for such designation, as identified under the Federal Endangered Species Act (ESA), or which would directly or indirectly destroy or adversely modify the critical habitat of such species. No activity shall be authorized under this General Permit which "may affect" a listed species or critical habitat, unless ESA Section 7 consultation addressing the effects of the proposed activity has been completed.

h. The permittee is responsible for obtaining any “take” permits required under the U.S. Fish and Wildlife Service’s regulations governing compliance with the Migratory Bird Treaty Act or the Bald and Golden Eagle Protection Act. The permittee should contact the appropriate local office of the U.S. Fish and Wildlife Service to determine if such “take” permits are required for a particular activity.

i. If authorized activities are conducted over revetted areas of a federal navigation project and damage to the revetment occurs as a result of the authorized activity, the permittee would be required to make necessary repairs at their own expense. These repairs would meet specifications designated by the District Engineer.

j. Persons conducting work under this General Permit would be required to comply with applicable navigational regulations. If the display of navigational aids, such as lights and signals on permitted structures and/or vessels during and after construction activities, is not otherwise required by law, they may be required by the U.S. Coast Guard. These and other mandatory navigational aids may be required to be installed and maintained at the expense of the permittee.

k. Activities would not be authorized at locations on or adjacent to a component of the National Wild and Scenic River System, or a State Natural and Scenic River System, without the appropriate Federal or State authorization.

l. The discharge would not occur in a Coastal Zone Management area without the appropriate State authorization. The coastal zone approval would be submitted with the request for authorization. The coastal zone approval would be submitted with the request for authorization under the General Permit. In order to be authorized by the General Permit for work in Hancock County, Mississippi, or St. Tammany Parish, Louisiana, persons proposing work in these coastal areas would be required to send complete plans to the appropriate state agency at one of the following address:

Mississippi Department of Marine Resources
1141 Bayview Avenue
m. The activities and/or discharge of dredged/fill material authorized by this General Permit would not adversely affect tidal waters, including tidal wetlands.

n. Projects located on property encumbered by an Natural Resources Conservation Services (NRCS) Wetlands Reserve Program (WRP) easement would not be authorized without written release/approval from the NRCS. Under such situations, the application would not be considered complete until the Corps is provided written documentation of release/approval from the agreement by the NRCS.

o. Activities would not be authorized on a property/area managed by a state or federal natural resources agency (e.g. wildlife management areas, national wildlife refuges, national forests, etc.) without documented approval (e.g. special use permit, waiver, etc.) by the managing agency.

p. Dredged, excavated, or fill material used for construction would be nonpolluting material, in accordance with the Environmental Protection Agency Guidelines for the Discharge of Dredged or Fill Material found in 40 CFR 230.

q. All construction activities would be performed in a manner that would minimize increased turbidity in waters within and adjacent to the work area to avoid adverse impacts to water quality and aquatic life, especially during fish spawning season. Adequate best management practices would be required.

r. Impacted stream embankments would be stabilized or restored after completion of construction activities.

s. All material excavated on site and not used to construct the facility would be placed in an upland or other non-jurisdictional area. Return water from excavated material placed at such disposal site would not be allowed to reenter the waterway or adjacent wetlands.

t. The authorized discharge would not be located so as to adversely affect a public water supply intake or a national fish hatchery intake.
u. The discharge would not contain unacceptable levels of pathogenic organisms in areas used for activities involving physical contact with the water.

v. The discharge would not occur in areas of concentrated shellfish production.

w. No sewage, oil, refuse, or other pollutants would be discharged into the waterbody.

x. Authorizations for this General Permit would not be granted to an applicant who is in noncompliance with a Department of the Army permit until such noncompliance has been resolved.

y. Any conditions on the water quality certifications issued from the State in which the work is proposed would be incorporated by reference. Enforcement actions resulting from noncompliance with these conditions may be initiated by the State of the Environmental Protection Agency.

General Conditions:

a. The permittee would maintain the activity authorized by the permit in good condition and in conformance with the terms and conditions of the permit. The permittee would not be relieved of this requirement if the permitted activity is abandoned. However, a good faith transfer to a third party in compliance with General Condition ‘b.’, below, would be acceptable. If the permittee desires to abandon the authorized without a good faith transfer, or wishes to cease to maintain the authorized activity, a modification of the authorization must be obtained from this office, which may require restoration of the area.

b. If the permittee sells the property associated with the authorization under this General Permit, the permittee would notify this office to ensure that the authorization is transferred to the new owner.

c. Representatives from this office would be allowed to inspect the authorized activity at any time deemed necessary to ensure that it is being, or has been, accomplished in accordance with the terms and conditions of the permit.

d. This permit would not obviate the need to obtain other Federal, State, or local authorizations required by law.

e. This permit would not grant any property rights or exclusive privileges.
f. This permit would not authorize any injury to the property or rights of others.

g. This permit would not authorize interference with any existing or proposed Federal project.

h. In issuing this permit, the Federal Government would not assume any liability for the following:

   (1) Damages to the permitted project, or uses thereof, as a result of other permitted or unpermitted activities or from natural causes.

   (2) Damages to the permitted project, or uses thereof, as a result of current or future activities undertaken by, or on behalf of, the United States in the public interest.

   (3) Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit.

   (4) Design or construction deficiencies associated with the permitted work.

   (5) Damage claims associated with any future modification, suspension, or revocation of this permit.

i. In issuing individual authorization under this General Permit, the Government would rely on the information and data which the permittee provides in connection with the permit application. If, subsequent to the authorization, such information and data prove to be false, incomplete, or inaccurate, the authorization may be modified, suspended or revoked, in whole or in part, and/or the Government may, in addition, institute appropriate legal proceedings.

j. This General Permit would be valid for 5 years from the date of issuance.

[General Permit - 25, WQC2014031].

The Office of Pollution Control certifies that the above-described activity will be in compliance with the applicable provisions of Sections 301, 302, 303, 306, and 307 of the Federal Water Pollution Control Act and Section 49-17-29 of the Mississippi Code of 1972, if the applicant complies with the following conditions:
1. The Department of Environmental Quality (MDEQ) shall be provided a copy of the final permit and associated enclosures and attachments.

2. The permittee obtaining authorization under General Permit-25 shall obtain appropriate wastewater permits and/or approvals for the proposed activity prior to the commencement of construction activities.

3. All fill material and excavation areas shall have side slopes of at least 3:1 (horizontal:vertical) and shall be immediately seeded, stabilized and maintained.

4. Appropriate best management practices (BMPs) shall be properly installed and maintained to prevent the movement of sediment off-site and into adjacent drainage areas. Special care shall be taken prior to and during construction to prevent the movement of sediment into adjacent avoided wetland areas. In the event of any BMP failure, corrective actions shall be taken immediately.

5. Prior to the start of construction activities, coverage under a Stormwater Construction General NPDES Permit shall be obtained. No construction activities shall begin until such approvals are obtained.

6. All stream impacts (including streams identified as ephemeral by the U.S. Army Corps of Engineers and described as non-relatively permanent waters) shall be mitigated in kind with stream mitigation elements. In the event that stream mitigation is not available and alternate mitigation proposals are provided, a pre-construction notification shall be provided to MDEQ and 10 working days shall be allowed to provide comments.

7. A pre-construction notification shall be provided to MDEQ for projects that include channel work within waterways found on the latest version of the State of Mississippi’s Section 303(d) List of Impaired Water Bodies for sediment or biological impairment or waterways with a completed Total Maximum Daily Load (TMDL) for sediment or biological impairment. This notification shall include the following:
   
   a. Justification of why the impacts cannot be avoided;

   b. Proposed best management practices that would minimize the impacts to receiving sensitive waters; and
c. Compensatory mitigation primarily along the same reach of stream or on another impaired stream within the same drainage basin.

8. Turbidity outside the limits of a 750-foot mixing zone shall not exceed the ambient turbidity by more than 50 Nephelometric Turbidity Units.

9. No sewage, oil, refuse, or other pollutants shall be discharged into the watercourse.

The Office of Pollution Control also certifies that there are no limitations under Section 302 nor standards under Sections 306 and 307 of the Federal Water Pollution Control Act which are applicable to the applicant's above-described activity.

This certification is valid for the project as proposed. Any deviations without proper modifications and/or approvals may result in a violation of the 401 Water Quality Certification. If we can be of further assistance, please contact us.

Sincerely,

Harry M. Wilson III, P.E., DEE
Chief, Environmental Permits Division
